

User Manuals for a wooden cabinet with LED lighting

Thank you for purchasing our cabinet. All our products are made with the greatest attention to detail. We are one of the leading mirror manufacturers in Europe. Thanks to this, you can be sure that you are getting the highest quality product. The LED lighting cabinet should be used in accordance with its intended purpose, strictly adhering to the descriptions, conditions and information provided in this manual.

Getting your tools ready

Prepare the necessary tools for mounting the mirror so that you can pass the whole process smoothly and successfully.

a Soft towel

a Measuring tape

a Drill bit 8mm

a Drill

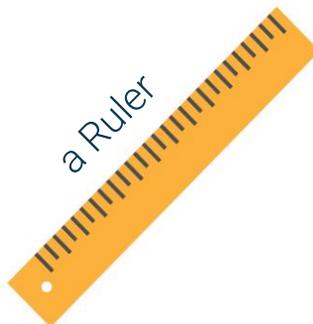

a Pencil

an Insulated screwdriver

a Ruler

a Spirit level

Remember!

Use the cabinet according to its absolute purpose by following the descriptions, conditions and provided information in this manual.

Warning!

Do not place the cabinet on a hard surface (e.g. directly on tiles). Firstly put a blanket or a folded towel on the ground. This will reduce the likelihood of damage to the glass.

- » Do not hang the cabinet on profiles, furniture and the ceiling.
- » Make sure the wall you want to hang the mirror on is strong enough.
- » Long use of LED strip can make it very hot. Avoid keeping flammable substances near it. Don't touch the lighting.
- » The cabinet should not be used in the places where it will be exposed to excessive moisture or high temperature (according to zones).
- » When assembling the cabinet, pay special attention to its edges. They are the most susceptible to damage.
- » The cabinet is heavy due to the wooden structure and 4 glued mirrors. We recommend that you install the mirror carefully and be careful assembly by at least two people.
- » Connecting the cabinet for 220V mains installation should remain carried out by a specialist or an authorized person.
- » There are 4 glass shelves attached to the cabinet. Don't put them inside until the cabinet is mounted.
- » Be careful not to damage the cabinet and the rear surface of the mirror during the assembly process.

Preparation for assembly

- » Open the package and take out the cabinet. Remember to put it on a soft surface, such as a towel or rug.
- » Check that all items are included in the package.
- » Only remove the protective foil at the end of the assembly. It should be on the mirror throughout the assembly process up to hanging on the wall.
- » If any item is missing or you find that the mirror or cabinet has been damaged in the shipment, please contact us.

Preparation for wall mounting

- » Measure the distance between the holes on the back of the cabinet.
- » Having the exact distance of the above-mentioned elements, mark the points on the wall with a pencil where you will place the wall plugs with hooks.
- » Check that the marked points on the wall are equal. For this, it is worth using a spirit level.
- » Check with a tape measure that the distance between the marked points is equal to the distance between the holes on the back of the cabinet.
- » Make sure that there are no holes in the drilling area pipes or electric cables.
- » Prepare the items: 8mm drill bit, 8mm dowels, screws (L hook type).
- » Drill holes in the wall for the mounting pins.
- » Place the wall plugs in the drilled holes.
- » Screw the screws (L hooks) into the expansion bolts. They should be screwed in in such a way that they protrude from the wall to a distance of about 3 cm. Their even positioning ensures that the cabinet is hung evenly
- » Hang the cupboard on the hooks. Make sure the hooks are in the eyelets. The cabinet should be stable.
- » Use an electric cube to connect the cabinet. Make sure the electricity is off. If necessary, switch off the fuses!
- » If you are not experienced in connecting electrical appliances directly to the network, consult an electrician.

Cleaning & Maintenance

- » Remove the protective film and corner protectors from the mirror surface.
- » In order to remove any glue residues from the foil from the mirror, use acetone, solvent or nail polish remover.
- » For everyday mirror cleaning, use agents designed for cleaning mirrors or glass surfaces.
- » Avoid cleaning with silicone or acid agents.
- » When cleaning the mirror periodically, for example with glass cleaners or water, remember to disconnect the mirror from the 230V / 50Hz mains and wait 45 minutes for the mirror to cool down completely.

Terms of use

- » The cabinet should be used in accordance with its intended purpose.
- » Do not install the cabinet in a place where it will be exposed to excessive moisture.
- » The electric installation of the mirror should not be interfered with. All such things should be reported to the manufacturer.
- » It is not allowed to modify or replace the elements of the illumination system in the mirror. Any repairs, replacements or modifications should be performed by the manufacturer's service or an authorized specialist service.
