

# P5 WiFi Weather Station User's manuals

Thank you for purchasing our mirror.  
We make all our products with the greatest attention to details. We are one of the leading brands that produce mirrors in Europe, so you can be sure you get the highest quality product. Use your mirror according to its absolute purpose by following the descriptions, conditions and provided information in this manual.

# Weather Display Operating Instructions

Make sure that the router, phone and mirror are as close as possible to each other when connecting to the WiFi network; and make sure that the mirror is not too far from the router once installed. The smartphone must remain connected to the 2.4 GHz WiFi network during the configuration process. The station does not support 5Ghz WiFi networks. If you don't know what network you have, please contact your operator for help

In the AppStore (iOS) or GooglePlay (Android), search for the „Tuya Smart“ application. The application is free. Install it. After installing the app successfully, find the Tuya Smart icon on the desktop of your mobile phone and click on it.

1. Press the "+" symbol or select "Add device" to grant the required permissions to the Tuya Smart app.
2. Hold the button on the back of the mirror for 3 seconds. The WI-FI icon on the screen will flash..

# Weather Display Operating Instructions

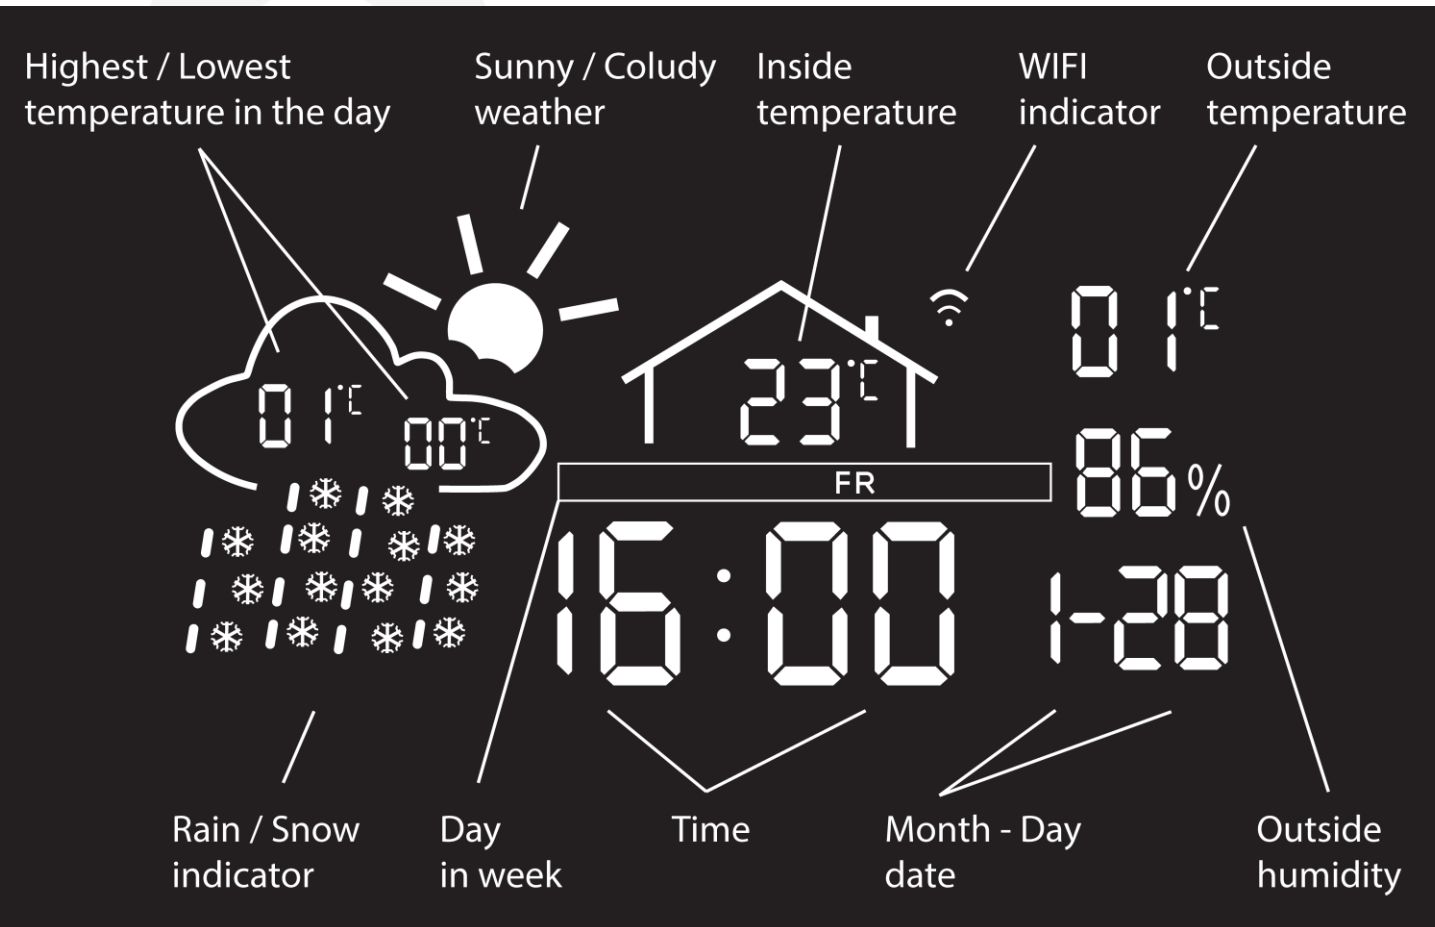

3. Press "Add" to add a weather station and enter the Wi-Fi network password (only 2.4GHz network is supported)

4. After the weather station is correctly paired with the Tuya Smart application, a screen like this should appear with the option to choose the unit in which the temperature should be displayed.

# Explanation of indicators and icons on the display.

1. Highest / Lowest temperature in the day
2. Sunny / Cloudy weather
3. Inside temperature
4. WIFI indicator
5. Outside temperature
6. Rain / Snow indicator
7. Day in week
8. Time
9. Month – Day date
10. Outside humidity

# Diagnostics of the WiFi connection problem

Follow the steps below to diagnose Wi-Fi connection problems:

## Failed to add the device to the network?

Reset the power to the mirror. Connect and disconnect the device. Repeat 4-6 times.

## Check the Router

The device only supports the 2.4 GHz WiFi network

## Dual-band router

Give the 5Ghz and 2.4Ghz bands a different SSID (a different name). Connect your smartphone to the 2.4Ghz network at all times during the setting.

## Station still cannot see the Wifi Router?

Get a second phone that can create its own Wi-Fi hotspot and allows you to select bands. Turn off your home Wi-Fi, set up a hotspot with your phone, turn off the 5 GHz band (or just turn on the 2.4 GHz band) and give it the same name and password as on your home network. Connect and then turn your home Wi-Fi back on.

## Please note:

- When connecting, routers, telephones, and devices should be as close as possible.
- The device only supports the 2.4 GHz Wi-Fi network. Your smartphone should connect to the 2.4Ghz network when setting up. Sometimes the 5Ghz network affects the connection due to frequency interference. So the best way is to separate the SSID of both networks.
